

Cook Mechanical Field Services

From tear-down and inspection through final assembly and start-up, Cook Mechanical Field Services (Cook-MFS) can execute every aspect of your project.

Cook-MFS has the knowledge and experience to keep your site's full range of rotating and reciprocating equipment operating reliably, efficiently and economically. Our seasoned field service personnel provide on-site repairs, portable machining, maintenance, overhauls, installation and turnkey project work, in addition to logistics, diagnostics and troubleshooting.

Meanwhile, our facilities have heavy-lifting capabilities and the resources to perform services ranging from minor machine work to complete rebuilds. As part of the same family of brands as Cook Compression®, Waukesha Bearings® and Inpro/Seal®, we can also provide advanced compressor, bearing and seal technologies and upgrades.

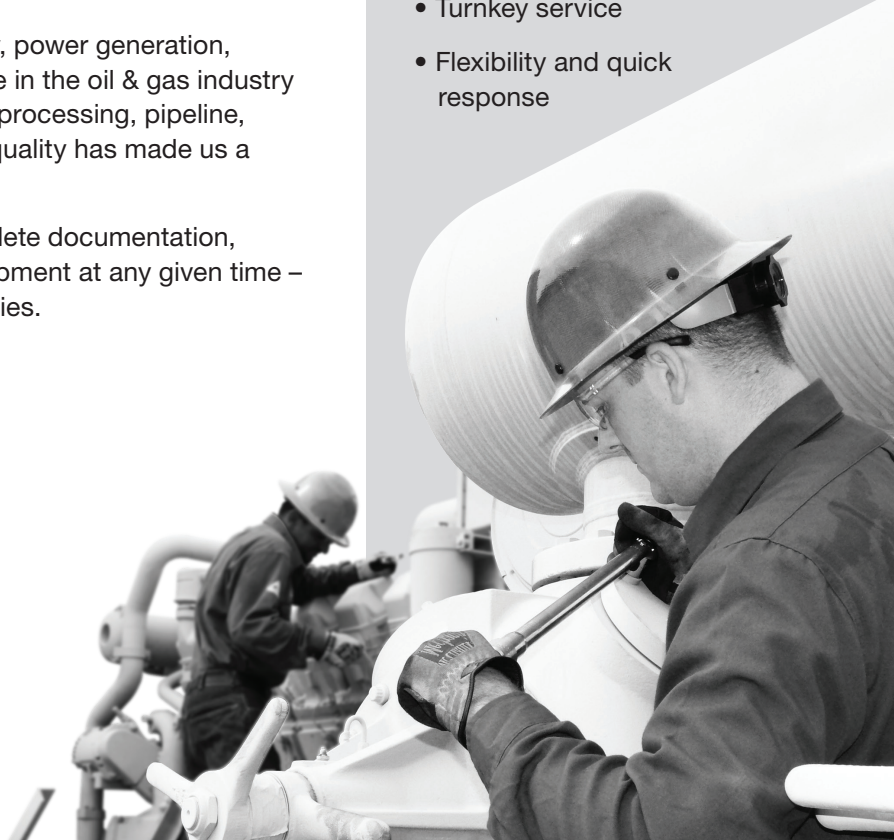

DOCUMENTED QUALITY

For 30 years, we have served the diverse needs of energy, power generation, manufacturing and other heavy industries. Our experience in the oil & gas industry extends from wellhead applications and gas gathering to processing, pipeline, refining and petrochemical. Moreover, our reputation for quality has made us a service provider of choice for industry leaders.

Each completed Cook-MFS job is accompanied by complete documentation, ensuring that our customers know the health of their equipment at any given time – and can plan for outages instead of respond to emergencies.

ADVANTAGES

- Superior safety record
- Improved machinery performance, reliability and regulatory compliance
- Complete project documentation to facilitate asset management
- Highly trained technicians
- Engineering and project management
- Turnkey service
- Flexibility and quick response

COMPREHENSIVE MECHANICAL SUPPORT

Our diversity of services and wide-ranging experience enable us to handle a variety of projects:

- **Field Work:** Mechanical services for turnarounds, plant shutdowns, machine overhauls and new construction
- **Preventive and Predictive Maintenance:** Full-time or periodic on-site services to provide condition-based maintenance for critical machinery
- **Turnkey Projects:** Custom-engineered equipment upgrades and optimization, with complete project planning
- **Spares Inventory:** Storage of spare parts on a long- or short-term basis in our humidity-controlled building, as well as inventory management through on-site surveys

Cook-MFS services all sizes and designs of machinery, including compressors and pumps, extruders and mixers, generators and gearboxes, motors and engines, blowers and turbines. Along with parts, labor, logistics and engineering, Cook-MFS offers cost savings, through improved reliability, single-source support and outside-the-box solutions.

We take a collaborative approach with the customer to prioritizing the delivery of services to critical need areas, minimizing productivity losses and maximizing project efficiency.

A RECORD OF SAFETY

Cook-MFS maintains a safety record among the best in the industry. Our commitment to safe practices and superior work is backed by stringent safety and quality programs and ongoing training of our employees. We continue to make significant investments in tools and equipment in order to apply the latest technology to our services.
